

Multidata-Bluegarden improving customer service while reducing cost

"IntraData had the technology we needed, and they worked beyond our expectations to further develop a solution that has improved our service offerings to our customers."

Bent Jensen,

executive vice president
Multidata A/S, Denmark

"We feel safe when working with IntraData. They are very professional and competent, and we find that our requests are handled to our full satisfaction. We would recommend them anytime."

Anette Bach,

project manager
Multidata A/S, Denmark

Multidata-Bluegarden is a leading service provider in the field of payroll management and HR services. Every month more than 2.3 million Scandinavians receive their paychecks through solutions provided by Multidata-Bluegarden. Multidata-Bluegarden is able to provide tools and concepts for automated HR processes, covering all aspects of a company's HR needs.

The scenario

In 2001, Multidata was looking for a solution enabling the company to reduce the amount of paper output from payroll systems delivered to customers in the LE (Large Enterprises) segment. Multidata was contacted by IntraData, who had previously developed a solution which, to a large extent, matched Multidata's requirements.

During the next months Multidata and IntraData worked closely together in order to develop a solution perfectly suited to meet the needs of Multidata's customers.

The first solution: Loenview

IntraData offered a highly specialized solution, called Loenview, giving Multidata's customers the ability to receive their payroll output electronically and store it on their own server. The solution soon proved to be highly appreciated by Multidata's customers, who were no longer presented with huge amounts of paper output.

Management summary

customer: Multidata A/S, Denmark

industry: HR/Payroll Services

challenge: to improve customer service offerings in an increasing competitive environment and meet concrete customer requirements

solution: a specialized technology enabling customers to capture their payroll output electronically and storing it securely and easily accessible

benefits:

- Improved competitive edge - highly comfortable solution where customer information is made available to customers through a simple mouse click.
- The solution is fast and secure and is highly appreciated by customers.
- Easy to use - fully intuitive user interface further accelerating the success of the services.
- The solution is very stable and requires only little maintenance: significant cost savings for Multidata.

The next challenge: the SMB

By 2004, the Loenview solution was used by a large share of Multidata's customers in the LE segment. Multidata now had the ambition of spreading the Loenview solution to customers in the SMB (small medium business) segment, and a new business case was formulated.

In addition to the Loenview solution, Multidata now wanted to offer customers not only electronic output, but also the possibility of archiving their payroll documents safely and securely by Multidata; i.e. Multidata decided to provide the SMB segment with an ASP solution in order to ease the customers' administrative procedures.

The next solution: E-arkiv

Once again, the cooperation between Multidata and IntraData turned out to be effective and solution-oriented, and the product, 'E-arkiv' was developed. E-arkiv is accessible from the internet and does not require any software installation on the customer's server. E-arkiv includes an archiving system giving customers the opportunity to save their payroll documents under safe and easy accessible conditions.

E-arkiv was launched in December 2006. By spring 2008 it is being used by + 25.000 customers in the SMB segment. For this group of customers, it is essential that they can handle their payroll tasks securely and easily, and E-arkiv is the solution to this challenge. With E-arkiv, Multidata's customers are able to access their documents whenever they want without worrying about safety issues.

The results

Loenview and E-arkiv are very popular among Multidata's customers, and Multidata expects to attract even more customers in the next years.

Multidata appreciates the low maintenance level of both Loenview and E-arkiv which means that the daily routines around the products can be kept to a minimum. This also means that the solutions are very cost-effective.

Experiences with IntraData

IntraData has been a reliable partner who keeps promises and has worked closely with Multidata in order to achieve a solution fully tailored to meet Multidata needs. Multidata has experienced IntraData as a very flexible and professional partner, always ready to handle new tasks in compliance with the issues and purposes set up for the process.

Multidata wants to be able to meet the needs of their customers in the future and is therefore always developing new solutions. Multidata acknowledges the possibility of extending the E-arkiv solution with even more functionality, and depending on customer requirements, Multidata will look into the possibilities in the future. Multidata is certain that the cooperation with IntraData will continue concurrently with the emerging of new business opportunities.

IntraData; carefree Enterprise Document Management

IntraData is a subsidiary of the Solipsis group and since 1996, has brought the IntraOffice document management system on the market. It is the first complete solution for digital archive management that supports bulk computer output.
